

This listing of claims will replace all prior versions, and listings of claims in the application:

LISTING OF CLAIMS:

Claim 1 (original - previously allowed)

1. A system for tracking a mobile vehicle comprising:

a device, mounted to the underside of said vehicle, said device comprising a GPS electro-magnetic signal processor means in hard-wire connection to a first wireless communication means, said first communication means being enabled for wireless communication with a remote communication means;

GPS antenna means connected to said GPS signal processor means, having stacked ground and positive plates separated by a separator plate, said positive plate having an exposed face engaged by a polymeric composition containing particles of a conductive metal, said GPS antenna means being enabled to receive electromagnetic GPS signals transmitted from an orbiting satellite;

wherein said GPS signal processor means is enabled to generate data from signals received from said GPS antenna means which identify geographic location of said GPS signal processor means; said data identifying geographic location is transported by hard-wire connection to said first wireless communication means; and said first wireless communication means converts said data to an appropriate wireless radio signal and transmits said wireless radio signal to said remote communication means.

Claim 2 (original - previously allowed)

2. The system of claim 1 wherein said first wireless communication means is arranged to transmit a signal through hard-wire connection to said GPS signal processor means, which enables said GPS signal processor means to perform a function in response.

Claim 3 (original - previously allowed)

3. The system of claim 2 wherein said first wireless communication means is arranged to receive a wireless radio signal from said remote communication means and in response thereto to transmit a signal to said GPS signal processor means which initiates a change in the performance of its data generation function.

Claim 4 (original - previously allowed)

4. The system of claim 3 wherein the signal transmitted to the GPS signal processor means initiates or stops data generation by the GPS signal processor means.

Claim 5 (original - previously allowed)

5. The system of claim 3 wherein the signal transmitted to the GPS signal processor initiates a change in processing parameters by the GPS signal processor means.

Claim 6 (original - previously allowed)

6. The system of claim 1 wherein said GPS antenna means, is mounted to an underside surface of said vehicle.

Claim 7 (original - previously allowed)

7. The system of claim 6 wherein said GPS antenna means, is mounted to the underside of said vehicle by magnetic means.

Claim 8 (original - previously allowed)

8. The system of claim 6 wherein said device having a GPS electromagnetic signal processor means connected to said first wireless communication means, and said GPS antenna means, are both mounted to the underside of said vehicle by permanent magnet means.

Claim 9 (original - previously allowed)

9. The system of claim 6 wherein said GPS antenna means is not mounted in direct line-of-sight orientation with a GPS electromagnetic signal transmitting, orbiting satellite.

Claim 10 (original - previously allowed)

10. The system of claim 1 wherein a wireless radio signal transmission received by said remote communication means from said first wireless communication means of said device, is digitized for communication with computer means.

Claim 11 (original - previously allowed)

11. The system of claim 10 comprising computer means in communication with said remote wireless communication means, said computer means being enabled to send data to said remote wireless communication means which initiates the transmission of a wireless radio signal by said remote communication means to said first wireless communication means, which initiates a change in the performance of data generation function by said GPS processor means.

Claim 12 (original - previously allowed)

12. The system of claim 11 wherein said computer means can be accessed through the internet for remote viewing, tracking and functional control of data produced by said GPS processor means.

Claim 13 (original - not allowed)

13. In an electromagnetic signal receiving antenna assembly having stacked ground and positive plates separated by a separator plate arranged to enable receipt of electromagnetic signals, the improvement comprising enhancing receipt of electromagnetic signals by said antenna assembly by engaging an electromagnetic signal receiving face of a positive plate of said assembly with a polymeric composition containing a random dissociated suspension of conductive metal particles.

Claim 14 (original - not allowed)

14. The GPS antenna assembly of claim 13 wherein said polymeric composition encases said stacked ground and positive plates separated by a separator plate, intimately engaging exposed surfaces of said stacked positive, ground and separator plate.

Claim 15 (original - not allowed)

15. The GPS antenna assembly of claim 13 comprising a metal shield base plate stacked adjacent said base ground plate.

Claim 16 (original - not allowed)

16. The GPS antenna of claim 15 wherein said metal shield base plate comprises an electronic circuit board in electrical communication with said positive plate which is enabled to enhance electromagnetic radio signals received by said positive plate.

Claim 17 (original - not allowed)

17. The GPS antenna assembly of claim 16 comprising a metal shroud arranged spaced from and stacked adjacent to said electronic circuit board.

Claim 18 (original -not allowed)

18. The GPS antenna assembly of claim 17 wherein said polymeric composition encases said stacked shroud, shield base plate, ground plate, separator plate and positive plate, intimately engaging exposed surfaces thereof.

Claim 19 (original - not allowed)

19. The GPS antenna assembly of claim 13 wherein said conductive metal particles comprise magnesium carbonate.

Claim 20 (original - previously allowed)

20. The GPS antenna assembly of claim 19 wherein said polymeric composition comprises polyester resin, styrene monomer, talc, magnesium carbonate powder and sodium borosillicate.

Claim 21 (original -not allowed)

21. The GPS antenna assembly of claim 13 wherein said antenna is mounted to the exterior surface of the short leg of an "L" shaped bracket, the long leg being arranged for quick mounting to the underside of a vehicle.

Claim 22 (original - not allowed)

22. The GPS antenna assembly of claim 21 wherein said bracket comprises an electrically conductive metal and the exterior surface of the long side of the "L" comprises a ceramic magnet sufficient for mounting said antenna to a metallic underside of said vehicle.

Claim 23 (original - not allowed)

23. The GPS antenna assembly of claim 22 wherein said stacked plates and polymeric composition containing particles of conductive metal of said antenna are isolated from electrical conductive contact with said metal bracket.

Claim 24 (original - not allowed)

24. The GPS antenna assembly of claim 23 wherein said antenna is attached to said bracket by non-conductive means.

Claim 25 (original - not allowed)

25. The GPS antenna assembly of claim 24 wherein said non-conductive means comprises an epoxy.

Claim 26 (original - not allowed)

26. The GPS antenna assembly of claim 21, wherein the positive plate of the antenna is oriented to face the exterior surface of the short leg of the bracket.

STATUS OF THE APPLICATION

The prosecution record prior to the citation of the new AISENBREY applications was that claims 1-12 are allowed; dependent claim 20 is objected to as not dependant upon an allowed claim; independent claim 13 has been rejected under 35 USC 103 over Bunyan et al in view of Applicant's admitted prior art; and, dependent claims 12-19 and 21-26 are rejected under 35 USC 103 over Bunyan et al in view of Applicant's admitted prior art.

The rejection of claims 12-19 and 21-26 over Bunyan et al have been abandoned and are no longer applicable.

All of the newly imposed rejections depend upon the disclosure of AISENBREY for validity.

An Affidavit under 37 CFR 131(b) has been presented herewith swearing behind the priority date of the Aisenbrey reference.

REMARKS/ARGUMENTS

Reconsideration of the above-identified application is respectfully requested.

THE REJECTION OF DEVICE CLAIMS 13-26

UNDER 35 USC 103

OVER AISENBREY IN VIEW OF THE ADMITTED PRIOR ART:

Applicant notes that the Examiner has abandoned all prior rejections of these claims and newly cites Aisenbrey as the basic reference. It is pointed out that the present application was placed on file by Applicant on March 16, 2001, less than 30 days
